sustainable organizational performance and competitive advantages are crucial in today's business landscape where companies are expected to deliver financial success while demonstrating environmental and social responsibility. Many organizations that have successfully integrated sustainability into their business strategies have balanced profitability with ethical practices, innovation, and resource efficiency. Firms can create competitive advantages by adopting sustainable practices such as reducing carbon footprints, promoting ethical sourcing, or fostering inclusive work environments which resonate with both consumers and investors as the global focus shifts toward sustainability. Further research may offer insights into how businesses can thrive while staying socially and environmentally conscious. Cases on sustainable organizational performance and competitive advantages explore insights into resilience creation in the face of global challenges and solutions for active involvement. Sustainable practice implementation ensuring lasting, robust performance. It provides proactive and integrated approaches to navigating uncertain environments. This book covers topics such as environmental science, ethics, and law, and project management and is a useful resource for business owners, economists, managers, policymakers, academicians, and researchers.

This proceedings is a collection of 14 papers presenting the lessons learned from a number of case studies and ranging from small to large scale projects from community based to corporate operations and from development to conservation activities. These papers presented topics on afforestation and peatland restoration and management under the clean development mechanism, forest management, carbon forestry markets, carbon sequestration, climate change, and livelihood sustainability.

Trees have been around for more than 370 million years and today there are about 80 thousand species of them occupying 3.5 billion hectares worldwide including 250 million ha of commercial plantations. While forests can provide tremendous environmental, social, and economic benefits to nations, they also affect the hydrologic cycle in different ways as the demand for water grows and local precipitation patterns change due to global warming. Plantation forestry has encountered an increasing number of water related conflicts worldwide. This document provides a country by country summary of the current state of knowledge on the relationship between forest management and water resources based on available research publications. The editor in chief of this document contacted local scientists from countries where the impact of forest management on water resources is an issue, inviting them to submit a chapter.

Presenting cutting edge observations, this research handbook tackles the intersecting crises of biodiversity loss and climate change.

from a legal perspective experts critically analyse international laws and institutions protecting biodiversity highlighting key areas of development conflict and opportunity

the social dynamics of deforestation and of forest protection are the ongoing interactions amongst social actors and processes that determine the use and management of forests based on a vast amount of research and detailed case studies in brazil central america nepal and tanzania as well as several papers dealing with wider themes and regions this book argues that most current discussions of increased rates of deforestation and perceived accompanying environmental crises are overly simplistic institutional reforms and policy measures that have been undertaken in developing countries usually failed to protect either the forests or people s livelihoods technical solutions to deforestation are only one element in what are essentially political questions the central issue is not how to halt deforestation but rather how to manage forest areas and natural resources in order to meet social goals on a more equitable and sustainable basis conventional wisdom that attributes deforestation primarily to peasant ignorance and population growth is questioned as are other single factor explanations such as market and policy failures

does the diagnosis of irreversible destruction of both forests and their biodiversity actually mask a wide range of patterns based on the results of natural and social scientists this book attempts to answer fundamental questions such as what is deforestation and how do we measure it what changes result from deforestation and how do human societies manage these changes it explores the many and varied aspects of deforestation a process whose effects are not always as negative as perceived

an area of forest the size of england is cut down in the tropics each year forestry is responsible for a fifth of global carbon emissions more than the entire world transport sector urgent action to tackle the loss of global forests needs to be a central part of any new international agreement on climate change climate change financing global forests is an independent report commissioned by the uk prime minister to address this vitally important issue it assesses the impact of global forest loss on climate change and explores the future role of forests in the international climate change framework with particular emphasis on the role of international finance it also looks at the economic and policy drivers of deforestation and describes the incentives required to ensure more sustainable production of agriculture and timber in order to meet global demand while reducing carbon emissions the report draws on a wide range of international expertise and will have significant national eu and international interest and influence it includes new modelling and analysis of the global economic impact of continued deforestation and provides a comprehensive assessment of the

opportunity and capacity building costs of addressing the problem it shows that the benefits of halving deforestation could amount to 3.7 trillion over the long term however if the international community does not act the global economic cost of climate change caused by deforestation could amount to 12 trillion in this comprehensive and detailed report Johan Eliasch makes a clear and forceful case for forests to be included in international carbon trading mechanisms he calls for the international community to support forest nations to halve deforestation by 2020 and to make the global forest sector carbon neutral by 2030

Tropentag is the largest interdisciplinary conference in Europe on development-oriented research in the fields of tropical and subtropical agriculture food security natural resource management and rural development normally the Tropentag takes place annually however for reasons that by now have become obvious the past two years have been particularly challenging we are therefore delighted that the University of Hohenheim managed to host a hybrid version of the conference from 15<sup>th</sup> to 17<sup>th</sup> September 2021 being a hybrid conference it was pleasing to note that people did not only gather in one of the lecture theatres at the University of Hohenheim but also in one of the state of the art seminar rooms at the Czech University of Life Sciences in Prague the rest of course attended via Zoom meetings being streamed on YouTube channels using the Whova online platform
