this book develops a new approach to naturalizing phenomenology the author proposes to integrate
phenomenology with the mechanistic framework that offers new methodological perspectives for
studying complex mental phenomena such as consciousness while mechanistic explanatory models

are widely applied in cognitive science their approach to describing subjective phenomena is limited the author argues that phenomenology can fill this gap he proposes two novel ways of integrating phenomenology and mechanism first he presents a new reading of phenomenological analyses as functional analyses such functional phenomenology delivers a functional sketch of a target system and provides constraints on the space of possible mechanisms second he develops the neurophenomenological approach in the direction of dynamic modeling of experience he shows that neurophenomenology can deliver dynamical constraints on mechanistic models and thus inform the search for an underlying mechanism mechanisms and consciousness will be of interest to scholars and advanced students working in phenomenology philosophy of mind and the cognitive sciences

this book gathers the proceedings of the 15th iftomm world congress which was held in krakow poland from june 30 to july 4 2019 having been organized every four years since 1965 the congress represents the world s largest scientific event on mechanism and machine science mms the contributions cover an extremely diverse range of topics including biomechanical engineering computational kinematics design methodologies dynamics of machinery multibody dynamics gearing and transmissions history of mms linkage and mechanical controls robotics and mechatronics micro mechanisms reliability of machines and mechanisms rotor dynamics standardization of terminology sustainable energy systems transportation machinery tribology and vibration selected by means of a rigorous international peer review process they highlight numerous exciting advances and ideas that will spur novel research directions and foster new multidisciplinary collaborations

the tumor microenvironment tme plays a pivotal role in cancer progression and response to therapy within this complex milieu immunological niches are specialized microenvironments that support the survival differentiation and function of immune cells profoundly influencing tumor immunity these niches are formed through intricate interactions between tumor cells immune cells and stromal cells mediated by various cytokines chemokines and adhesion molecules the stability and functionality of these niches can be altered by suppressive factors such as tgf β and il 10 contributing to tumor immune evasion tumor associated stromal cells also play a critical role in shaping these niches further complicating the immune landscape of the tme key components of immunological niches include tertiary lymphoid structures tls immune checkpoint niches cytokine and chemokine niches stromal and fibroblastic niches metabolic niches epigenetic niches and microbiome associated niches understanding the formation and regulation of these niches is crucial

for developing new therapeutic strategies understanding the formation and regulation of immunological niches is crucial for developing new therapeutic strategies targeting these niches can potentially enhance the efficacy of immunotherapies and improve clinical outcomes this research topic aims to explore the clinical value molecular and cellular mechanisms underlying the formation of immunological niches their impact on tumor immune evasion and the development of novel therapeutic approaches to modulate these niches
